Feedback Questionnaire Form
CA675 – Cloud Technologies

Your group ID: Group M
Group ID of the report being reviewed: Group O

Section 1 – General Idea

What I find bad/can be improved in this idea is , instead of creating a separate app or integration with a website, create a web plugin which can be added to the web browser so that the analytics can be run on any review based website.

What I find good/has potential in this idea is , it is unique and has never been implemented in an productive environment.

One problem/challenge you might encounter with this idea is implementation.

Section 2 – Technology

Technology 1
One key technology used in this project is Python

Does this technology fit the general idea?
☒ Yes   ☐ No

If Yes, one way the app can be expanded/improved using such technology is , since the application lightweight, I would prefer the Flask framework over Django.

If No, why?

Technology 2
Another key technology used in this project is Spark

Does this technology fit the general idea?
☒ Yes   ☐ No

If Yes, one way the app can be expanded/improved using such technology is , using PySpark would be a nice idea, considering the Django/Flask works well with it.

If No, why?

Section 3 – Task allocation and user roles

Is the task allocation fair/reasonable?
☒Yes   ☐No

If Yes, who do you think is a good leader candidate for the group and why?
The task is divided equally among 4 teammates, but I would prefer Paritosh as the team leader because he handles both front end and backend of the application. So it would be easier to evaluate the status of the tasks and delegate work accordingly.

If No, say why and indicate at least one advice for improving fairness in task allocation.
